Physical Modeling and Computational Techniques for Thermal and Fluid-dynamics - Maurizio Bottoni 2021-11-12
This book on computational techniques for thermal and fluid-dynamic problems arose from seminars given by the author at the Institute of Nuclear Energy Technology of Tsinghua University in Beijing, China. The book is composed of eight chapters-- some of which are characterized by a scholastic approach, others are devoted to numerical solution of ordinary differential equations of first order, and of partial differential equations of first and second order, respectively. In Chapter IV, basic concepts of consistency, stability and convergence of discretization algorithms are covered in some detail. Other parts of the book follow a less conventional approach, mainly informed by the author's experience in teaching and development of computer programs. Among these is Chapter III, where the residual method of Orthogonal Collocations is presented in several variants, ranging from the classical Galerkin method to Point and Domain Collocations, applied to numerical solution of partial differential equations of first order. In most cases solutions of fluid dynamic problems are led through the discretization process, to the numerical solutions of large linear systems. Intended to impart a basic understanding of numerical techniques that would enable readers to deal with problems of Computational Fluid Dynamics at research level, the book is ideal as a reference for graduate students, researchers, and practitioners.

New Operational Approaches for Financial Modelling - Constantin Zopounidis 2012-12-06
th This book is devoted to the 19 Meeting of the EURO Working Group on Financial Modelling, held in Chania, Crete, Greece,November28-30, 1996. The EURO Working Group on Financial Modelling was founded in September 1986 in Lisbon. The primary field of interest for the Working Group can be described as "the development of financial models that help to solve problems facedby financial managers in the firm". From this point of view, the following objectivesof the Working Group are distinguished: • providing an international forum for exchange of information and experience on financial modelling; • encouraging research in financial modelling (i. e. new techniques, methodologies, software,empirical studies,etc.); • stimulating and strengthening the interaction between financial economic theory and the practice of financial decision making; • cooperating and exchanging information with universities and financial institutions throughout Europe. According to the aboveobjectives,the basic aim of this book is to present some new operational approaches (i. e. neural nets, multicriteria analysis, new optimization algorithms, decision software, etc.) for financial modelling, both in a theoretical and practical levels. Thus, the present volume is divided in nine chapters. The first chapter refers to the new trends in financial modelling and

includes two invited papers by Gil-Aluja and Pardalos. The second chapter involves papers on the topic of high performance computing and finance which is a European union project in which participate some members of the EURO Working Group on Financial Modelling (Spronk, Zenios, Dempster, etc.).

Italian Mathematics Between the Two World Wars - Angelo Guerraggio 2006-01-20
This book describes Italian mathematics in the period between the two World Wars. It analyzes the development by focusing on both the interior and the external influences. Italian mathematics in that period was shaped by a colorful array of strong personalities who concentrated their efforts on a select number of fields and won international recognition and respect in an incredibly short time. Consequently, Italy was considered a third mathematical power after France and Germany.

Intonation Systems - Daniel Hirst 1998-12-10
This is the first comprehensive study of the intonation of different languages of the world, written by a team of leading scholars in the field, most of whom are native speakers of the language in question. Surveying twenty languages, the volume introduces a new system for the multi-lingual transcription of intonation patterns. The chapters are organised following the same general outline to highlight the differences

between languages. The emphasis is on description and comparison, rather than on theory, making this an invaluable sourcebook for researchers in the field.

Vedo Rumore - Andrea Gobbo 2019-02-20
Una bussola per studenti, insegnanti e genitori che vogliono "tenere la prua sulla rotta della leggerezza" Perché divertendosi si può studiare meglio ed è più facile apprendere? É come andare in bicicletta con entrambe le ruote ben gonfie: si arriva prima e si procede più velocemente. Come conservare vivo il sogno di felicità e di bellezza che tutti abbiamo intravisto nella nostra giovinezza? Professori che precorrono i tempi, metodi di studio molto efficaci, gli scherzi divertenti della goliardia. Uno spaccato insieme scanzonato e profondo di quelli che sono stati forse i migliori anni della nostra vita, non solo dell'autore.
