The Cognitive-Theoretic Model of the Universe: A New Kind of Reality Theory - Christopher Michael Langan 2002-06-01

Paperback version of the 2002 paper published in the journal Progress in Information, Complexity, and Design (PCID). ABSTRACT Inasmuch as science is observational or perceptual in nature, the goal of providing a scientific model and mechanism for the evolution of complex systems ultimately requires a supporting theory of reality of which perception itself is the model (or theory-to-universe mapping). Where information is the abstract currency of perception, such a theory must incorporate the theory of information while extending the information concept to incorporate reflexive self-processing in order to achieve an intrinsic (self-contained) description of reality. This extension is associated with a limiting formulation of model theory identifying mental and physical reality, resulting in a reflexively self-generating, self-modeling theory of reality identical to its universe on the syntactic level. By the nature of its derivation, this theory, the Cognitive Theoretic Model of the Universe or CTMU, can be regarded as a supertautological reality-theoretic extension of logic. Uniting the theory of reality with an advanced form of computational language theory, the CTMU describes reality as a Self Configuring Self-Processing Language or SCSPL, a reflexive intrinsic language characterized not only by self-reference and recursive self-definition, but full self-configuration and self-execution (reflexive read-write functionality). SCSPL reality embodies a dual-aspect monism consisting of infocognition, self-transducing information residing in self-recognizing SCSPL elements called syntactic operators. The CTMU identifies itself with the structure of these operators and thus with the distributive syntax of its self-modeling SCSPL universe, including the reflexive grammar by which the universe refines itself from unbound telenesis or UBT, a primordial realm of infocognitive potential free of informational constraint. Under the guidance of a limiting (intrinsic) form of anthropic principle called the Telic Principle, SCSPL evolves by telic recursion, jointly configuring syntax and state while maximizing a generalized self-selection parameter and adjusting on the fly to freely-changing internal conditions. SCSPL relates space, time and object by means of conspansive duality and conspansion, an SCSPL-grammatical process featuring an alternation between dual phases of existence associated with design and actualization and related to the familiar wave-particle duality of quantum mechanics. By distributing the design phase of reality over the actualization phase, conspansive spacetime also provides a distributed mechanism for Intelligent Design, adjoining to the restrictive principle of natural selection a basic means of generating information and complexity. Addressing physical evolution on not only the biological but cosmic level, the CTMU addresses the most evident deficiencies and paradoxes associated with conventional discrete and continuum models of reality, including temporal directionality and accelerating cosmic expansion, while preserving virtually all of the major benefits of current scientific and mathematical paradigms.

The Effects of Weather Shocks on Economic Activity: What are the Channels of Impact? - Mr. Sebastian Acevedo Mejia 2018-06-22

Global temperatures have increased at an unprecedented pace in the past 40 years. This paper finds that increases in temperature have uneven macroeconomic effects, with adverse consequences concentrated in countries with hot climates, such as most low-income countries. In these countries, a rise in temperature lowers per capita output, in both the short and medium term, through a wide array of channels: reduced agricultural output, suppressed productivity of workers exposed to heat, slower investment, and poorer health. In an unmitigated climate change scenario, and under very conservative assumptions, model simulations suggest the projected rise in temperature would imply a loss of around 9 percent of output for a representative low-income country by 2100.

Healthy Aging - Patrick P. Coll 2019-03-29

This book weaves all of these factors together to engage in and promote medical, biomedical and psychosocial interventions, including lifestyle changes, for healthier aging outcomes. The text begins with an introduction to age-related changes that increase in disease and disability commonly associated with old age. Written by experts in healthy aging, the text approaches the principles of disease and disability prevention via specific health issues. Each chapter highlights the challenge of not just increasing life expectancy but also decreasing disease burden and disability in old age. The text then shifts into the whole-

person implications for clinicians working with older patients, including the social and cultural considerations that are necessary for improved outcomes as Baby Boomers age and healthcare systems worldwide adjust. Healthy Aging is an important resource for those working with older patients, including geriatricians, family medicine physicians, nurses, gerontologists, students, public health administrators, and all other medical professionals.

Transformative Strategies - Brian Tjemkes 2021

"Transformative Strategies is based around the idea that strategic thinking is critical for organizational success in today's environment. The financial crisis, continuing economic uncertainty, digitalization, environmental issues and social issues involved in globalization present strategic problems for enterprises. Unlike other textbooks that take a standard solutions-based approach, Transformative Strategies provides readers with a way to develop strategies that fit their own complex situations and shows how models may be applied in different ways to different problems. Each of the four key elements affecting the business environment (globalization, disruption, collaboration, and responsibility) are addressed as a set of tensions in eight areas: global competition, business model innovation, digital strategizing, business eco-systems, corporate social responsibility, top management teams, and trans-cultural leadership in a globalized world. This tension-based pedagogy enables readers to shift from dichotomized thinking (such as exploring or exploiting) to transformative thinking (such as exploring and exploiting; exploring through exploiting) and readers are challenged to solve real problems companies face, encouraging them to acknowledge the broader context in which organizations operate and analyse the problem from multiple perspectives. Each chapter is structured to aid engagement and discussion, including a discussion of the tension tied to the chapter's topic, learning objectives, theoretical frameworks, real life case studies, exercises and reflective questions. A highly practical book that encourages readers to develop solutions that fit their own complex problems, it will be particularly suitable for those studying strategic management as part of an MBA, MA or MSc in Management, as well as those in executive education. It will also appeal to all those interested in learning how to lead and transform organizations towards impact, purpose and relevance. Online resources include discussions of the case studies, supplementary problems for class discussion, and an instructors' manual outlining the pedagogical approach"--

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles - National Research Council 2010-08-30

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.

Racism and Modernity - Wulf Dietmar Hund 2011

Written by a team of international scholars, the seventeen essays in this book collectively and critically reflect on the historical genesis of modern racism, from its constitution in early modernity, and its systematization in the Enlightenment period, to various forms of its popularization in modern society. This structure derives from the work of Wulf D. Hund, to whom this festschrift is dedicated. Inspired by his analysis of racialized discourses in European thought and global history, the book shows modern racism to be a mode of a negative societalization. Crowdfunding with Enhanced Reputation Monitoring Mechanism (Fame) - Omid Torabi 2020-01-20

Crowdfunding is fast becoming a method of mobilizing project finance ventures, particularly in a sharing economy. From an Islamic finance perspective, it is imperative to first address the Islamic crowdfunding system before looking further into Fintech trends impacting the Islamic finance landscape. Moreover, the element of risk sharing which is found in equity crowdfunding makes up the essence of Islamic finance. However, as with any type of risk-sharing contract, Islamic crowdfunding faces the problem of lack of trust and information asymmetry. The author employs a game theory approach to Islamic crowdfunding as a means to tackle the issue of information asymmetry through a "reputation mechanism" which is touted as one of the latest means of solving information asymmetry in web-based social networks. The primary objective of the reputation mechanism is to enable more efficient transactions in communities where cooperation is compromised by post-contractual opportunism or information asymmetry. In today's web-based world, the role of reputation has become much more important as a mechanism for establishing trust and eliminating the risk of fraud in online transactions. The game theory approach in this study involves two different games: "without Fame" and "with Fame", and it is proposed that a "with Fame" crowdfunding game produces better results. The reputational mechanism in this research was also designed specifically to eliminate any potential moral hazards and minimize information asymmetry. In this study, "Fame" refers to the credibility of every individual within the crowdfunding system. Fame is a form of systematic, measurable and computable (implicit and explicit) reputation, which allows other members of the crowdfunding social network to better learn about the individual and their credibility. This is based on the user's banking/ financial credit, social credit, participation (activities) history and their success in previous transactions.

In Fairness to Future Generations - Edith Brown Weiss 1988

In this book Professor Weiss combines thorough research and careful analysis with imaginative solutions and a moral fervour, to show how rules of international law can be applied in an intertemporal dimension, and how the basic principles of the intergenerational equity can be developed to provide new standards for human behaviour. She manages to communicate to the reader not only that the situation is getting desperate but also that human intelligence can in time devise adequate remedies, without destroying completely our way of life.

Ethology and Behavioral Ecology of Otariids and the Odobenid - Claudio Campagna 2021-06-03

This book is focused on the marine mammalian groups the Otariidae and the Odobenidae, otherwise known as fur seals, sea lions and the walrus. In 30 chapters, more than 60 authors from 30 institutions and 13 nationalities, discuss a broad suite of topics from maternal care and mating behavior, through play, cognition and personality, to adaptation to life in the Anthropocene. The authors explore the behaviors that have allowed these semi-aquatic mammals to thrive in the marine realm. Many populations have recovered following historical decimation, with interesting evolutionary consequences which are explored. Detailed, selected, individual species descriptions are also provided, showcasing the behavioral diversity of this engaging, adaptive and highly successful group of marine mammals.

Grog War - Alexis Wright 2021-11-25

A revamped Magabala classic by Miles Franklin award-winning author Alexis Wright. First published in 1997, this vivid portrayal of how the Indigenous people of Tennant Creek worked together to achieve community-wide alcohol restrictions, is more relevant now than ever. A searing account of what transpired over 25 years ago, Grog War provides historical context and Indigenous-led solutions to the challenges still confronting communities and towns throughout Australia. In the '90s, Wright was commissioned by the Julalikari Council of Tennant Creek to write Grog War, to document how Aboriginal Elders and leaders dealt with the invasion of grog on Warumungu land and the enormous struggle it took to introduce simple alcohol restrictions in the town. Grog War traces an Indigenous-led movement of self-determination that shifted the blame from Aboriginal people for public drunkenness to looking at the way grog is pushed and sold, in turn challenging the town and government to share responsibility. Aboriginal Elders and community advisors in Tennant Creek fought for years to put alcohol restrictions in place and they are still fighting. Their courage and tenacity is an inspiration for other towns in Australia who are battling against the tide of alcohol abuse and resistance from licencees and the broader community. Grog War is essential reading for all those working towards and interested in Indigenous self-determination, for community leaders, legislators, health workers, social workers - and for our young people - so that all Australian children might grow up with a better understanding of what Indigenous people have fought hard to achieve in this country.

Advanced Jazz Guitar Concepts - Jens Larsen 2019-07-12

In *Advanced Jazz Guitar Techniques* jazz guitar virtuoso Jens Larsen provides more deep insights into the techniques and theory of contemporary jazz guitar.
