**Economic Analysis of Information and Contracts** - Gerald A. Feltham 1988-06-30

The three coeditors knew John Butterworth for many years and had worked closely with him on a number of research projects. We respected him as a valuable colleague and friend. We were greatly saddened by his untimely death. This book is an attempt to remember him. We dedicate the volume to John with thanks for the contributions he made to our research, to the Faculty of Commerce and Business Administration at the University of British Columbia, and to the accounting profession. This volume contains twelve invited papers on the general topic of the economic theory of information and contracts. We asked leading scholars who had known John to contribute papers. The response was very gratifying. The authors provided us with new strong research papers that should make a lasting contribution to the accounting and information economics research literature, and make us all proud to have put this volume together. The research

papers in the volume are in three sections: information evaluation in multi person contexts; contracting in agencies under moral hazard; and contracting in agencies with private information. We begin part I with Jerry Feltham's review of John Butterworth's pioneering contributions to the accounting and information economics literature. This is followed by an introduction to the papers in the volume and the papers themselves.

**OECD/G20 Base Erosion and Profit Shifting Project Measuring and Monitoring BEPS, Action 11 - 2015 Final Report** - OECD 2015-10-15

There are hundreds of empirical studies finding evidence of tax-motivated profit shifting, using different data sources and estimation strategies. While measuring the scope of BEPS is challenging given its complexity and existing data limitations, a number of recent studies suggest that BEPS is responsible for significant global corporate income tax (CIT) revenue losses. This report assesses currently available data and concludes that significant limitations severely constrain economic analyses of the scale and economic impact of BEPS and improved data and methodologies are required. Noting these data limitations, a dashboard of six BEPS indicators has been constructed, using different data sources and assessing different BEPS channels. These indicators provide evidence that BEPS exists and has been increasing over time. New empirical analysis estimates that the scale of global CIT revenue losses could be between USD 100 and 240 billion annually at 2014 levels. The report also presents a toolkit to assist countries evaluate the fiscal effects of BEPS countermeasures. The research also finds significant non-fiscal economic distortions arising from BEPS. The report concludes by making recommendations regarding data and monitoring tools to improve the analysis of BEPS in the future

**Financial Soundness Indicators** - International Monetary Fund 2006-04-04

Financial Soundness Indicators (FSIs) are measures that indicate the current financial health and soundness of a country's financial institutions, and their corporate and household counterparts. FSIs

include both aggregated individual institution data and indicators that are representative of the markets in which the financial institutions operate. FSIs are calculated and disseminated for the purpose of supporting macroprudential analysis—the assessment and surveillance of the strengths and vulnerabilities of financial systems—with a view to strengthening financial stability and limiting the likelihood of financial crises.

Financial Soundness Indicators: Compilation Guide is intended to give guidance on the concepts, sources, and compilation and dissemination techniques underlying FSIs; to encourage the use and cross-country comparison of these data; and, thereby, to support national and international surveillance of financial systems.

**Institutional Diversity in Banking** - Ewa Miklaszewska 2016-12-20

This book offers a comparative analysis of how post-crisis restructuring has affected the evolution and prospects of small, locally-oriented banks. The discussion focuses specifically on “small” European countries; that is, countries with diversified banking systems, with a strong presence of cooperative and other forms of local banks. Such countries include highly developed economies like Italy and emerging European economies, such as Poland. The authors stress the unique importance of local banks in generating credit for both households and firms, and hence in contributing to overall economic growth. Chapters cohere around the argument that although smaller banks fared better than their larger counterparts the recent financial crisis, they have been directly and indirectly discriminated against in post-crisis restructuring schemes, and, as such, face many operational and strategic challenges today. The contributors are a distinguished group of researchers with expert knowledge of the competitive positions of and opportunities for locally oriented banks, who combine theoretical and empirical perspectives on these topics.

**Capitalizing on Crisis** - Greta R. Krippner 2011

Capitalizing on Crisis offers a political sociology of the rise of finance in the U.S. economy over the last three decades. Krippner's core argument is that successive U.S. administrations embraced policy choices that heightened financialization as a way to escape direct confrontation with the pressing issues of fiscal crisis and legitimation crisis that emerged in the late 1960's, rather than as a policy goal of its own. This is an extremely important argument for understanding the last forty years of U.S. politics and social development and it helps reconnect economic sociology to political sociology. Krippner focuses on state actions that were crucial to creating a macroenvironment conducive to financialization: (1) the deregulation of financial markets during the 1970s and 1980s; (2) policies that encouraged foreign capital inflows into the U.S. economy in the context of large fiscal imbalances in the early 1980s; and (3) changes in the conduct of monetary policy following the shift to tight monetary policies (high interest rates) in 1979.

**Investment Banks, Hedge Funds, and Private Equity** - David Stowell 2012-09-01

The dynamic environment of investment banks, hedge funds, and private equity firms comes to life in David Stowell's introduction to the ways they challenge and sustain each other. Capturing their reshaped business plans in the wake of the 2007-2009 global meltdown, his book reveals their key functions, compensation systems, unique roles in wealth creation and risk management, and epic battles for investor funds and corporate influence. Its combination of perspectives—drawn from his industry and academic backgrounds—delivers insights that illuminate the post-2009 reinvention and acclimation processes. Through a broad view of the ways these financial institutions affect corporations, governments, and individuals, Professor Stowell shows us how and why they will continue to project their power and influence. Emphasizes the needs for capital, sources of capital, and the process of getting capital to those who need it. Integrates into the chapters ten cases about recent transactions, along with case notes and questions Accompanies cases with spreadsheets for readers to create their own analytical frameworks and consider choices and opportunities.

**The End of Men** - Hanna Rosin 2012-09-11

Essential reading for our times, as women are pulling together to demand their rights— A landmark portrait of women, men, and power in a transformed world. “Anchored by data and aromatized by anecdotes, [Rosin] concludes that women are gaining the upper hand.” -The Washington Post Men have been the dominant sex since, well, the dawn of mankind. But Hanna Rosin was the first to notice that this long-held truth is, astonishingly, no longer true. Today, by almost every measure, women are no longer gaining on men: They have pulled decisively ahead. And “the end of men”—the title of Rosin's Atlantic cover story on the subject—has entered the lexicon as dramatically as Betty Friedan's “feminine mystique,” Simone de Beauvoir's “second sex,” Susan Faludi's “backlash,” and Naomi Wolf's “beauty myth” once did. In this landmark book, Rosin reveals how our current state of affairs is radically shifting the power dynamics between men and women at every level of society, with profound implications for marriage, sex, children, work, and more. With wide-ranging curiosity and insight unhampered by assumptions or ideology, Rosin shows how the radically different ways men and women today earn, learn, spend, couple up—even kill—has turned the big picture upside down. And in *The End of Men* she helps us see how, regardless of gender, we can adapt to the new reality and channel it for a better future.

**Employees and Corporate Governance** - Margaret M. Blair 2010-12-01

Most scholarship on corporate governance in the last two decades has focused on the relationships between shareholders and managers or directors. Neglected in this vast literature is the role of employees in corporate governance. Yet “human capital,” embodied in the employees, is rapidly becoming the most important source of value for corporations, and outside the United States, employees often have a significant formal role in corporate governance. This volume turns the spotlight on the neglected role of employees by analyzing many of the formal and informal ways that employees are actually involved in the governance of corporations, in U.S. firms and in large corporations in Germany and Japan. Examining laws and contexts, the essays focus on the framework for understanding employees' role in the firm and the implications for corporate governance. They explore how and why the special legal institutions in German and Japanese firms by which employees are formally involved in corporate governance came into being, and the impact these institutions have on firms and on their ability to compete. They also consider theoretical

and empirical questions about employee share ownership. The result of a conference at Columbia University, the volume includes essays by Theodor Baums, Margaret M. Blair, David Charny, Greg Dow, Bernd Frick, Ronald J. Gilson, Jeffrey N. Gordon, Nobuhiro Hiwatari, Katharina Pistor, Louis Putterman, Edward B. Rock, Mark J. Roe, and Michael L. Wachter. Margaret M. Blair is a senior fellow in Economic Studies at the Brookings Institution and author of *Ownership and Control: Rethinking Corporate Governance for the Twenty-first Century* (Brookings, 1995). Mark J. Roe, professor of business regulation and director of the Sloan Project on Corporate Governance at Columbia Law School, is the author of *Strong Managers, Weak Owners: The Political Roots of American Corporate Finance* (Princeton, 1996).

**A Central Bank's Guide to International Financial Reporting Standards** - Mr. Rudy Wytenburg 2021-12-17

About one-quarter of the world's central banks apply IFRS with approximately a quarter more looking to IFRS for further guidance where their local standards do not provide enough guidance. Given the varied mandates and types of policy operations undertaken by central banks, there also exists significant variation in practice, style, and the extent of the financial disclosures in both the primary statements and in the note disclosures. By their nature, central banks are unique in their jurisdiction and so do not always have local practices and examples they can follow. Although the major accounting firms have created model disclosures intended for commercial banks, these are often not totally appropriate for a central bank. The application of IFRS across central banks differs based on the mandate of the central bank and the capacity of the accounting profession in the specific jurisdiction. An analysis of international practices, such as those undertaken in preparing these model statements, may help address questions about the structure of the statements themselves as well as the organization of the note disclosures. As a consequence, each central bank following IFRS has largely developed its own disclosures with only limited reference to others. Input from the external auditors has been significant, but some of this has been determined by the approach used by the specific auditor's style for commercial banks rather than central banks. Auditors do not always fully appreciate the differences between a commercial bank and a central bank, which has a different role and undertakes transactions to meet its policy objectives. This has often led to an over emphasis of items not material in the context of a central bank and insufficient disclosures on operations or accountabilities specific to the functions of the central bank.

Disclosure and Determinants Studies - Marie Chavent 2006

Past accounting research contains an extensive range of disclosure and determinants studies. But these studies have one major methodological drawback: the disclosure analysis is often restricted to determination of the disclosure index, i.e. the sum of disclosed items, weighted or unweighted. The disclosure profile (which reflects the structure of published information) is generally not part of the research design. The objective of this paper is to introduce a divisive (descendant) clustering method, which splits the sample into homogeneous sub-groups corresponding to disclosure patterns (or profiles), for clearer determination of the financial characteristics of each group. This methodology is illustrated by a study of disclosure on provisions by large French firms. The results show that the disclosure pattern is related to provision intensity, size, leverage and market expectation, but not to profit, return and industry. This new research method is a valuable complementary tool for expanding on disclosure and determinants studies, moving from disclosure levels to disclosure patterns.

**The Dark Side of Bank Wholesale Funding** - Lev Ratnovski 2010-07-01

Banks increasingly use short-term wholesale funds to supplement traditional retail deposits. Existing literature mainly points to the "bright side" of wholesale funding: sophisticated financiers can monitor banks, disciplining bad but refinancing good ones. This paper models a "dark side" of wholesale funding. In an environment with a costless but noisy public signal on bank project quality, short-term wholesale financiers have lower incentives to conduct costly monitoring, and instead may withdraw based on negative public signals, triggering inefficient liquidations. Comparative statics suggest that such distortions of incentives are smaller when public signals are less relevant and project liquidation costs are higher, e.g., when banks hold mostly relationship-based small business loans.

Cote d'Ivoire - International Monetary Fund. African Dept. 2019-12-18

This paper discusses Côte d'Ivoire's Sixth Review Under the Arrangement of the Extended Credit Facility and the Extended Arrangement Under the Extended Fund Facility, and Request for Extension and Augmentation of Access. Côte d'Ivoire has been pursuing a development-oriented policy agenda, and the IMF-supported program in place since 2016 has supported that focus, paving the way for the private sector to become the main driver of growth. The performance under the program has been strong. The medium-term growth prospects remain robust, predicated on continuing prudent macroeconomic policy, furthering financial sector reforms and sustaining structural reforms to bolster private sector-led inclusive growth. Côte d'Ivoire's reform efforts have resulted in improvements in its business climate in recent years. It will be imperative to continue the reform agenda to further stimulate private sector activity and support inclusive growth, including by improving the energy sector, human capital and financial inclusion, accelerating digitalization, enhancing trade connectivity and governance, expanding the coverage of social safety nets, and reinforcing the statistical apparatus to help better inform economic policy.
